Resurrection from Depression
Lloyd Rosen
SC PTA's 94th Annual Convention Leadership Training
What is depression?
Depression is...

- More than feeling sad or going through a rough patch
- It’s a serious mental health condition
- With early detection, diagnosis and treatment - you can get better
- Left untreated, depression can be devastating

- People with severe depression can become a risk for suicide
- An estimated 16 million American adults had at least 1 major depressive episode last year - that’s 7% of the population!
Who is at risk?

- People of all ages
- People of all racial, ethnic and socioeconomic background

- **Women** are 70% more likely than men to experience depression

- **Young adults** aged 18-25 are more likely to experience depression

Symptoms of Depression...

- **Changes in sleep.** Many people have trouble falling asleep, staying asleep or sleeping much longer than they used to. Waking up early in the morning is common for people with major depression.

- **Changes in appetite.** Depression can lead to serious weight loss or gain when a person stops eating or uses food as a coping mechanism.

- **Lack of concentration.** A person may be unable to focus during severe depression. Even reading the newspaper or following the plot of a TV show can be difficult. It becomes harder to make decisions, big or small.

- **Loss of energy.** People with depression may feel profound fatigue, think slowly or be unable to perform normal daily routines.

- **Lack of interest.** People may lose interest in their usual activities or lose the capacity to experience pleasure. A person may have no desire to eat.
Symptoms of Depression...

- **Low self esteem.** During periods of depression, people dwell on losses or failures and feel excessive guilt and helplessness. Thoughts like “I am a loser” or “the world is a terrible place” or “I don’t want to be alive” can take over.

- **Hopelessness.** Depression can make a person feel that nothing good will ever happen. Suicidal thoughts often follow these kinds of negative thoughts—and need to be taken seriously.

- **Changes in movement.** People with depression may look physically depleted or they may be agitated. For example, a person may wake early in the morning and pace the floor for hours.

- **Physical aches and pains.** Instead of talking about their emotions or sadness, some people may complain about a headache or an upset stomach.

Who gets depression?

In one word - EVERYONE!
Who gets depression?

- **Men.** For cultural reasons, men may feel more shame about their depression and simply try to tough it out or use alcohol or drugs to self-medicate. Untreated depression in men can have devastating consequences, as men are about four times more likely to die by suicide than women.

- **Women.** Many factors unique to women’s lives play a role in whether they develop depression, including genetics, biology, reproduction, hormonal changes and interpersonal relationships.

- **Seniors.** Depression in elderly people often goes untreated because many people think that depression is a normal part of aging and a natural reaction to chronic illness, loss and social transition.
Who gets depression?

- **LGBTQ.** Lesbian, gay, bisexual, transgender and questioning (LGBTQ) people are at higher risk for depression because they regularly face discrimination from society at large and sometimes from family, co-workers or classmates.

- **Children and teens.** All children experience ups and downs while growing up, but for some, the downs aren’t commonplace—they are symptoms of depression. *Children and teens at higher risk for depression include those who have attention deficit/hyperactivity disorder, learning or anxiety disorders and oppositional defiance disorder.*

Economic Impact of Depression

- Major depressive disorder is the leading cause of disability in the U.S. for ages 15-44. (World Health Organization, 2004)

- Major depression is the leading cause of disability worldwide among persons five and older. (World Health Organization, "Global Burden of Disease," 1996)

- Depression ranks among the top three workplace issues, following only family crisis and stress. (Employee Assistance Professionals Association Survey, 1996)

Economic Impact of Depression

Depression’s annual toll on U.S. businesses amounts to about $70 billion in medical expenditures, lost productivity and other costs. Depression accounts for close to $12 billion in lost workdays each year. Additionally, more than $11 billion in other costs accrue from decreased productivity due to symptoms that sap energy, affect work habits, cause problems with concentration, memory, and decision-making. (The Wall Street Journal, 2001, National Institute of Mental Health, 1999)
Depression and Suicide

- Depression is the cause of over two-thirds of the 30,000 reported suicides in the U.S. each year. (White House Conference on Mental Health, 1999)

- For every two homicides committed in the United States, there are three suicides. Up to two-thirds of older adult suicides are attributed to untreated or misdiagnosed depression. (American Society on Aging, 1998)
Facts about Teens

- 11% of the teen population over 4 million students may suffer from major mental health disorder.

- Suicide as the third leading cause of death amongst people ages 10 to 24, and as many as 15% of students within this age group have considered taking their own lives.

- 21% of females have experienced major depressive episode. 10% of boys
How to recognize signs of depression in children...

- Physical/somatic complaints
- Irritability
- Difficulty concentrating
- Short-term memory impairments
- Difficulty with planning, organizing and executing tasks
- Hypersensitivity
- Poor performance and follow-through
- Inattention
How to recognize signs of depression in children...

- Forgetfulness
- Separation anxiety from parents or caregiver
- Facial expressions or body language indicating sadness
- Frequent absences from school; refusal to go to school
- Working slowly
How can you help?

Strategies to help students with depression.

- Give frequent feedback on academic, social, and behavioral performance.
- Teach the student how to set goals and self-monitor.
- Teach problem-solving skills.
- Coach the student in ways to organize, plan, and execute tasks demanded daily or weekly in school.
How can you help?
Strategies to help students with depression.

- Develop modifications and accommodations to respond to the student's fluctuations in mood, ability to concentrate, or side effects of medication. Assign one individual to serve as a primary contact and coordinate interventions.

- Give the student opportunities to engage in social interactions

- Frequently monitor whether the student has suicidal thoughts.
How can you help?

Strategies to help students with depression.

- Develop a home-school communication system to share information on the student's academic, social, and emotional behavior and any developments concerning medication or side effects.
What are additional ways that you as a parent or that the school staff can help?
Thank you for attending this workshop!
